Pie Graph - Favorite Food

Jack Restaurant surveyed a sample of customers on their favorite food. They made a pie graph with the survey results. Read the pie graph and answer the questions.

Food	Percentage
Hotdog	30
Burger	25
Sandwich	15
Pizza	10
Hot Chicken	20

- Which is the most favorite among the customers? _____
- How many customers like hot chicken? _____
- Which is the least favorite food? _____
- How many customers voted for burger as their favorite? _____
- How many customers participated in the survey? _____

Line Graph - Car Sales

George works as a salesman in an authorized car showroom. He records the number of cars sold in five days (Monday to Friday) on a line graph. Study the graph and answer the questions.

- How many cars were sold in 5 days? _____
- On which day were the maximum number of cars sold? _____
- How many cars were sold on Wednesday? _____
- Which day had the minimum sales of cars? _____
- How many more cars were sold on Tuesday than on Monday? _____

Name: _____ Score: _____

Picture Graph - Richard's Farm Animals

Richard, a farmer, owns some farm animals. Picture graph shows the number of animals he has in his farm. Use the picture graph to answer the questions.

- Which animal is fewest? _____
- How many goats are there? _____
- Are there more chickens or cows? _____
- Which animal counts to 2? _____
- How many animals are there in the farm? _____

PICTURE GRAPHS 1C - TRAVEL TO SCHOOL

This is how the children came to school on a Monday.

Each symbol shows how one child got to school.

Walk								
Car								
Bike								
Bus								

- How many children walked to school? _____
- How many children can by bike? _____
- How many children came by car? _____
- How many children can on the school bus? _____
- How many children did not walk? _____
- How did most children come to school that day? _____

Table of the Continents
Use the table to answer the questions.

Name _____

Continent	Area	Number of Countries	Population (as of 2011)
Africa	11,608,000 sq. km	54	778,000,000
Antarctica	5,100,000 sq. km	0	0
Asia	17,212,000 sq. km	47	3,674,000,000
Australia and Oceania	2,968,000 sq. km	14	31,000,000
Europe	837,000 sq. km	43	342,000,000
North America	9,365,000 sq. km	23	483,000,000
South America	6,880,000 sq. km	12	342,000,000

- How many continents are there? _____
- Which continent has the biggest area? _____
- Which continent has the smallest area? _____
- Which continent has the biggest number of countries? _____
- Which continent has the smallest number of countries? _____
- Which continent has the fewest people? _____
- Which is the most populous continent? _____
- How many people does the most populous continent have? _____
- Which is the second most populous continent? _____
- How many people does the second most populous continent have? _____

Interpreting graphs worksheet answer key.

Your doctor can suggest a follow-up audition test at a later date to ensure that your audience does not get worse. There are other parts for audiometry testing that look for aspects of hearing as: Speech recognition word Percentage of words of voice loss are several levels of hearing loss: Light refers to thresholds that They rang between 26 years - 40 deci- is; You can talk to people face to face and understand them perfectly, but struggle to hear sounds from far away, silent conversations or conversations in higher spaces. Moderato refers to thresholds ranging from 45 years, 65 decibé ; You fight to listen to conversations, you do not mind the scenario and have extreme auditory difficulty conversations in noisy spaces. Sure refers to thresholds ranging from 66 years, 85 decibé; You can only hear someone if they are talking loud and very close to you and you can not hear others sounds around your surround refers to thresholds greater than 85 decibések Professional for examining your audiogram and provide you with treatment options for hearing loss. 2. For each exercise below, click once in the answer box, enter your response; and then click Enter. The treatment of complement with noise protection is always important. A line with increases and drops along the graph indicates hearing loss for specific frequencies. Title The graph of the graph tells us what is the graph. These symbols represent: o or a triagle (possibly in red) is the result of the right ear measured with headphones (air conduction) x or a square (possibly in blue) is the result of the Your left ear measured with headphones (aerial conduction) are the result of hearing through a speaker (air conduction) or] is the result of your left ear with tion management the test administrator will notice these brands You indicate the smallest level of intensity in which you hear a frequency (pitch). She lives outside the FiladÁ © Lfia with her husband and two children. Children may need tests if they experience speech or other development delays. In what mothers there were 24 Vims? Now that we are familiar with the parts of a line graph, we can answer some questions about each of the above examples. The value of the dollar of your car changed each year, as shown in the table below. 229 Summary: A line graphic is useful to display data or information that changes continuously over time. What was the highest recorded temperature? Value value of the car year of Sarah 2001 \$ 24,000 2002 \$ 22,500 2003 \$ 19,700 2004 \$ 17,500 2005 \$ 14,500 2006 \$ 10,000 2007 \$ 5,800 The table data above were represented in the graph below. This test measures potential hearing loss. Example 3: The table below shows the weight of Sam in kilograms for 5 months. You should seek the guidance of a doctor or audiologist for treatment options, but understanding the foundations of an audiogram can help you analyze what you hear in the world around you. The audiogram is the visual result of an audiometry auditory test administered by an audiologist or other health professional. Lines in the graph that curves, change or sit down can be a sign of hearing loss. Low decibel sounds include whispers. Your answers should be given as a word or as an entire number. 73 kg 6. What was the largest number of people in the store? The value of the car increased or decreased over time? Features for high quality impressions to help students display data as well as reading and interpret data from: Bar Graphs Pie Graphics Pictograms column graphic Back to chance and sharing data in Pinterest/Getty Images / VisualspaceYou You can look at an audiogram to understand Ability to listen. How old are adolescents have the biggest cell phones? What is the range of values on the horizontal scale? horizontal? Start again, click Clear. Sensory angle loss is the hearing loss of the inner ear. What was the smallest number of cell phones at any age? The test administrator will ask you to raise your hand or press a button when you hear a sound. A line leaning down for higher frequencies is common in auditory loss related to aging. Some estimates affirm that 25% of adults over 50 years and 50% of those over 80 years experience hearing loss. 13h 3. Each of these graph shows a change in data in time. A line graph is useful to display data or information that changes continuously over time. The weight of SAM increased or decreased over time? This graph shows the quietest level you can hear high and low pitches, as observed by an audiologist or other health professional when performing an auditory test of audiometry. 0 to 25,000 4. What was the smallest number of people in the store? What was the lowest recorded temperature? 43 ° F 6. Numers are performed from 125 to 8,000 and measure Hertz (Hz). 1 to 6 3. 11 6. Decrease in Question Answer 1. 22 7. January to May 3. What was the lowest registered amount? The graph will be used to help us define the parts of a line graph. You can have a slight hearing loss between 16 and 25 decibels, but this may not require more correctness. In what MÃs there were fewer viduals? Exercises: Instructions: See the graph below to answer each question. The administrator marks the sounds you hear on an audiogram. The graph shows the limits where you can hear certain shades in the lowest possible sound. Smalltown teenagers with mobile phones 2. \$ 24,000 6. How many verms were there in February? What is the title of this graphic? The weight of Sam 2. This line indicates your auditory skill level throughout the volume and frequency. You can look at your 2. Determine if you have hearing loss: a stable line connecting your threshold levels on top top The graph indicates normal audition. Another name for one of that kind of graphic is a line graph. What is the title of this graphic? Sarah Car Value 2. 4. \$ 5,800 7. Some causes of hearing loss can be inverted and some can not be. You can look for an audiometry audience test if you realize changes in your audience or your doctor can recommend it as part of the wellness routine verifications. Day 3: 50 Å ° F Response 1. SAM Weight Mother Weight in KG January 49 February 54 March 61 April 69 May 73 The table data above were represented in the graph below. After clicking Enter, a message will appear in the Results box to indicate whether your response is correct or incorrect. Example 1: The table below shows the daily temperatures for the city of New York, recorded for 6 days, in degrees Fahrenheit. People in a store 2. Increase example 4: The graph below shows people in a store in several moments of the day. You can get an audiogram at any age, but this test is best for adults and older children. Children's audition is typically traced at birth. What was the largest number of cell phones at any age? Example 2: Sarah bought a new car in 2001 for \$ 24,000. 3. Scale horizontal scale at the bottom and vertical scale along the side tell us how much or how many. The Audiometer emits sounds that measures the sound intensity and the frequency. You can get an audiometry auditory test in a quiet space in the office of a doctor. 5. What is the graphic? What is the range of values on the vertical scale? How many cell phones 16 years old have they? We will set the various parts of a line graph. The conductive hearing loss is hearing loss in the outer ear or in the metering ear. In Example 1, the temperature was changed from day to day. You can learn more about Natalie's work on your site. Answer 1. What time does the business begin to slow down? Headphones, loudspeakers and ossea conducting devices can measure different parts parts The ear to determine the type of hearing loss. Some treatments may include: Your doctor can also recommend additional audiencies or diagnostic procedures to better understand your condition, such as obtaining a timpanogram or an exploration of e-mail. Examine your audiogram to decipher if you have hearing loss. How many people are in the store at 14:30? 2 Example 5: The graph below shows the number of adolescents from 13 to 19 years old to have cell phones. Natalie loves working in a profession that allows her to learn about many different topics in one day. What was the highest registered amount? Low frequency sounds are the sounds of bullfrogs or trovam. 15:00 4. Can distinguish your audience into each ear and if you have hearing loss on one or both sides. Where are auditory tests data? Traditional audiograms occur in the office of a doctor, but there is more recent technology that allows people to display their audience without the need to travel to a health professional. Your audiologist can recommend treatment based on your type of hearing loss portrayed at the audiogram and its severity. Natalie Silver is a writer, editor and owner of Editorial Services of Silver Scribe, a company of Publication Services. 0 to 80 4. Points The points or points in the graph show us the facts. How many verms were they in the march? Tags The horizontal label on the bottom and vertical label along the side tells us what kinds of facts are listed. An audiogram can diagnose your hearing loss as well as indicate what kind of hearing loss you have. 67 ° F 7. How many people are in the store when opens? 2 5. 642 7. This mark indicates its level of threshold. 19 years 3. How many points are in graphics? 7 5. 341 5. Audiogram will provide guidance on how to treat condition articulating the type of loss that you have, if one or both ears have hearing loss, and how much Loss you have. In Example 3, SAM's weight increased to each month. What is the busiest hour of the day in the store? In Example 2, the value of Sarah's car decreased from year to year. Temperatures in NY City Day Temperature 1 43 ° F 2 53 ° F 3 50 ° F 4 57 ° F 5 59 ° F 6 67 ° F Data from the table above were represented in the graph below. Lines The rows that connect the points provide estimates of the values between the points. A bottom line in the graph indicates an extreme hearing loss. Common auditory measures between -10 and 15 decibels for each threshold. How many points are in graphics? 6. Adults over 50 can experience auditory loss at age. The audiogram connects your various threshold levels for each ear. High frequency sounds can include the sounds a cricket makes or a whistle noise. The audience can measure different parts of the ear based on how you get the sounds. Look for a council of a doctor if you discover that you have hearing loss through these automated devices. There are points at the audiogram marked with several notes. These automated devices produce the same result as traditional tests and can make it easier for someone with accessibility challenges, such as cost and travel to be diagnosed. It is measured in decibodies (dB) and varies from -10 to 110 at the audiogram. In what mothers there were more verms? 13 years 4. What is the title of this graphic? Temperatures in New York 2. How many points are in graphics? 5 5. 2001 to 2007 3. At what point the temperature plunged? 500 6. Audiogram is a very simple graphic: the y axis (vertical) measures the intensity, or volume, of the sound. How old are adolescents have the smallest number of cell phones? Hearing loss can occur from: Normal RuideChectionFectionFectionFechologyLoshealth, you can even have several types of hearing loss. Winter Sports: Protica Read a Bar Graphnin This math spreadsheet, the children will read a bar graph on popular winter sports, then practice the extraction and analyze data as they respond to five questions. 49 KG 7. 1. The test uses a type of technology named Audia metro that can be connected to headphones, a speaker, or ossea conducting devices. If the thresholds are at the top of the graph, you will probably have normal audition. How many cell phones are 15 years old? High decibel sounds include jackfruit. The X-axis (horizontal) measures the frequency or tone of the sound. The points in the graph will be connected by a line. line.
